

RONNY KUAN HUAN LIN

Vancouver, British Columbia

oronnylin.github.io ◇ github/oRonnyLin ◇ linkedin/ronnylin

TECHNICAL STRENGTHS

Languages	TypeScript, JavaScript, C#, C++, Python, Java
Frameworks/Tools	React, Node.js, GraphQL, Webpack, FluentUI, MCP, HLS, MQTT, Kusto
Cloud	Azure, AWS, AliCloud
Patent	US 11179064 — Method and System for Privacy-Preserving Fall Detection

WORK EXPERIENCE

Senior Software Engineer <i>Microsoft - PowerPoint / Teams / Windows Photos</i>	December 2023 - Present <i>Vancouver, BC</i>
---	---

- Prototyped a modular rewrite of PowerPoint Live's bootstrapper, won funding, and led 5 engineers to productionize it, converting runtime script injection into a dynamic import the host prefetches while idle, improving perceived load time by 15%.
- Led the cross-org migration of PowerPoint Live's sync pipeline onto Teams' real-time communication stack; deployed dual-channel fallback with client-side dedup for zero-downtime rollout.
- Drove PowerPoint Live's session quality score from 90% to a historical high of 94% via a secondary-CDN retry strategy recovering 57,000+ sessions monthly and a completed CDN service migration.
- Built an HTTPS-intercepting telemetry viewer using Electron and TypeScript, with Fiddler-like capture via mockttp, a real-time log/network timeline, and an MCP server for agent interactions.
- Built Playground, a React mock host that boots PowerPoint Live sessions against local builds in a production setting, replacing a cross-repo dev inner loop and enabling mixed-version compatibility testing.
- Diagnosed Copilot latency with enterprise customers (EY, Deloitte, McKinsey, and UBS), root-causing it to repeated brand-asset fetches and LLM retries; proposed caching and validation fixes, which were adopted.
- Built C# and C++ telemetry and UI for generative AI features in the Windows Photos App, showcased in the Copilot+PC launch; established the team's live-site operating model and onboarding.

Software Engineer II <i>Microsoft - Teams / Office 365</i>	November 2020 - November 2023 <i>Vancouver, BC</i>
--	---

- Took Teams Video Clips in Channels from hackathon prototype to production for 3.7M monthly active users, re-architecting playback for 21% faster preview load, React render 0.8s to 0.4s, and a 30% smaller bundle.
- Implemented HLS media playback in Teams using React, and built plugin and integration APIs for Microsoft's internal media streaming platform, enabling reuse across Office 365 apps.
- Winner of Microsoft's Global Hackathon and Executive Challenge for a video messaging project that lets users speak in their own voice in the language they prefer (VALL-E X).

Software Developer <i>AltumView Systems Inc.</i>	January 2018 - December 2019 <i>Vancouver, BC</i>
--	--

- Built an IoT management platform using Node.js, React, Express, and MQTT to stream and control smart devices; built an automated image dataset pipeline (LAMP, Python, AWS) for ML training.

Research Assistant — Air Quality Sensor Data Analysis <i>Academia Sinica, National Academy of Taiwan</i>	July 2017 - September 2017 <i>Taipei, Taiwan</i>
--	---

EDUCATION

Stanford Online XCS221: Artificial Intelligence (in progress)	Aug 2026 - Oct 2026 <i>Nominated, Microsoft-sponsored</i>
University of British Columbia Bachelor of Science	Sept 2013 - May 2017 <i>Major in Computer Science</i>
